- 9M26 revenue grew 14.5% yoy, well above the initial 5-7% guidance, but higher input costs and a weaker rupiah limited core profit growth to 4.5%. New capacity and overseas growth sustain volumes; the mid-October price hike should keep 4Q26 margins broadly stable qoq. The recent easing in wheat prices should also improve sentiment going forward. Maintain BUY with a lower target price of Rp9,500 (from Rp10,150), based on 9.5x 2027F PE. ICBP is also executing its first ever Rp750b buyback.

Indofood CBP Sukses Makmur (ICBP IJ)

Volume Strength Intact; Margins Still The Swing Factor

Highlights

- 9M26 revenue grew 14.5% yoy, well above the initial 5-7% guidance, but higher input costs and a weaker rupiah limited core profit growth to 4.5%.
- New capacity and overseas growth sustain volumes; the mid-October price hike should keep 4Q26 margin broadly stable qoq. The recent easing in wheat prices should also improve sentiment going forward.
- Maintain BUY with a lower target price of Rp9,500 (from Rp10,150), based on 9.5x 2027F PE. ICBP is also executing its first ever Rp750b buyback.

Analysis

- **Top-line beat, but cost pressure capped earnings.** Indofood CBP's (ICBP) 9M26 revenue rose 14.5% yoy to Rp64.4t, its fastest since 9M22, prompting management to raise guidance to 12-14% (from 5-7%). Growth was broad-based (overseas +23%, domestic +11%) and mostly volume-led. However, higher raw material and freight costs and a weaker rupiah cut the EBIT margin to 21.2% (9M25: 22.6%), though it remains within the 20-22% guidance range. Core profit rose only 4.5% yoy to Rp8t but was slightly ahead of our estimate. Reported net profit fell 13.3% yoy to Rp6.2t on a Rp3.3t unrealised forex loss on its US dollar bonds (9M25: Rp1.4t).
- **Growth momentum to continue, backed by new capacity and supply chain resilience.** We expect 2026 revenue growth to reach the top end of the 12-14% guidance, although 4Q26 is likely to moderate qoq on seasonality and possible pre-buying ahead of the noodle ASP increase. New capacity from the factory opened in Dec 25 (+1.5b-2.0b packs a year, lifting domestic capacity by ~7%), wider distribution and 35+ new SKUs in 9M26 kept demand resilient despite a soft macro backdrop. Its supply chain also proved to be an edge. With about 22% of COGS sourced from the Indofood group and local production overseas through Pinehill, ICBP's overseas revenue grew 23% yoy in 9M26, while its competitors faced shipping and packaging disruptions from the Iran conflict.
- **Price hike in mid-Oct 26 to cushion cost pressure.** Amid persistently high raw material costs, with wheat and milk powder prices up about 9% qoq in 3Q26 (Bogasari also raised flour prices by a cumulative ~5% over May-Sep 26 and a further ~3% in Oct 26), we see the 3% domestic noodle ASP increase from mid-October as largely offsetting the lagged impact of these increases, keeping 4Q26 gross margin broadly stable qoq. That said, a more visible margin recovery still hinges on a stable rupiah, easing milk powder prices and limited El Niño impact on CPO.

Company Description

Indofood CBP Sukses Makmur provides a wide range of food products. The company is a total food solutions company with operations in all stages of food manufacturing from the production of raw materials and their processing through to consumer products on the retailer's shelf.

- **First ever share buyback.** ICBP is executing its first-ever buyback of up to Rp750b (26 Oct-31 Dec 26), about 5% of its free-float market cap. It comes after MSCI's 15 October proposal to downgrade Indonesia to Standalone status, which triggered Rp172b of foreign selling in the last two weeks of Oct 26. That ended three months of net inflows (+Rp344b in Jul-Sep 26), which had lifted the share price 17% to its late-August peak. Since its MSCI exclusion in Nov 25, foreign ownership has fallen from 12.1% to 9.9% of total shares (~62% to ~51% of the free float), but it remains sizeable.
- **US dollar bonds keep earnings exposed to the rupiah depreciation.** Net gearing improved to 0.35x at end-Sep 26 from 0.42x a year earlier. However, 98% of its Rp50.5t debt is US$2.75b of bonds maturing in 2031-32 and 2051-52, so the currency mismatch will remain for years. Every Rp100 of depreciation adds about Rp275b of unrealised forex loss, which explains the Rp3.3t loss in 9M26, based on our rough estimate. This is partly offset by Rp24.1t of net US dollar-linked operating assets, mainly cash, which generated a Rp953b operating forex gain.

Earnings Revision/Risk

- **We raise our 2026 and 2027 revenue estimates by 8.1% and 9.6%** to reflect stronger volume growth from new capacity, wider distribution and market share gains, as well as the noodle ASP increase. However, we lower our gross margin assumptions to 34.0% and 34.3% (from 34.6% and 35.6%) on elevated input costs and a weaker rupiah. Thus, our core profit (excluding forex impact) estimates rise by 3.6% for 2026 and 2.0% for 2027, implying core profit growth of 6.5% and 9.7% respectively.

Valuation/Recommendation

- **Maintain BUY with a lower target price of Rp9,500 (from Rp10,150).** We roll over our valuation to 2027F and lower our target PE to 9.5x (from 11x), -1.5SD below its three-year forward PE average of 12.3x, to reflect heightened country risk, the soft macro backdrop, input cost pressure and rupiah volatility. It is currently trading at 6.7x 2027 core PE, below -2SD of its three-year average (8.6x).

Share Price Catalyst

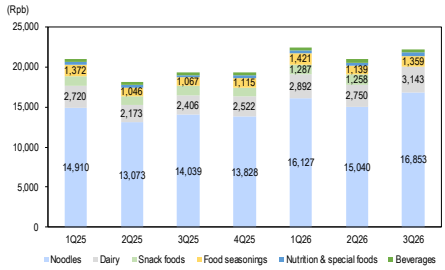

- **Catalysts:** a) 4Q26 results, b) easing wheat prices, and c) execution of its share buyback.

Technical BUY with 7% potential return

Resistance:	Rp442, Rp462
Support:	Rp380, Rp364
Stop-loss:	Rp380

Share price closed higher and formed a neutral candlestick. Price advanced with better momentum; hence, we see potential for more rallies ahead and challenge the resistance at Rp442 and Rp462. The RSI is sloping upwards and is out of its oversold zone, while the Stochastic has just issued a bullish signal and is also out of its oversold zone. Buy at Rp412 and take profit at Rp442.

Approximate timeframe: 2-4 weeks.

Technical BUY with 7% potential return

Resistance:	Rp366, Rp374
Support:	Rp326, Rp300
Stop-loss:	Rp324

Share price closed higher and formed a bullish candlestick. Price broke above its Rp326 resistance level; hence, it could trigger more rallies ahead and challenge the resistance at Rp366 and Rp374. The RSI is sloping upwards and approaching its midline, while the Stochastic has just issued a bullish signal. Buy at Rp336 and take profit at Rp360.

Approximate timeframe: 2-4 weeks.
