Top Stories

Company Update | Vale Indonesia (INCO IJ/**BUY**/Rp3,250/Target: Rp3,970)

Page 2 →

- INCO's 2027 growth will increasingly depend on higher ore sales, supported by a potential increase in RKAB allocation and ramp-up of HPAL projects. We forecast 18m wmt ore sales and US$200m net profit in 2027 (+14% yoy), despite lower nickel price and ore ASP assumptions. Maintain BUY with a lower target price of Rp3,970 based on 6.4x EV/EBITDA (-1SD to five-year mean), reflecting a weaker nickel price outlook, lower earnings expectations, and market risk-off.

Technical Analysis

Aspirasi Hidup Indonesia | ACES IJ

Page 5 →

- Trading Buy Range: We have a technical Buy at Rp350, and take profit at Rp368.

Barito Renewables Energy | BREN IJ

- Trading Buy Range: We have a technical Buy at Rp2,170, and take profit at Rp2,290.

Disclaimer: In Traders' Corner, technical analysis is carried out purely based on charting patterns, price movements and trends, and is thus independent of the fundamental research views of our analysts. As a result, and from time to time, we may make a technical recommendation that is opposite to our fundamental BUY/HOLD/SELL rating.

Vale Indonesia (INCO IJ)

Ore Sales To Drive 2027 Growth

Highlights

- **INCO's 2027 growth will increasingly depend on higher ore sales,** supported by a potential increase in RKAB allocation supported by the ramp-up of HPAL projects.
- **We forecast 18m wmt ore sales and US$200m net profit in 2027** (+14% yoy), despite lower nickel price and ore ASP assumptions.
- **Maintain BUY with a lower target price of Rp3,970** based on 6.4x EV/EBITDA (-1SD to five-year mean) reflecting a weaker nickel price outlook, lower earnings expectations, and market risk-off.

Analysis

- **3Q26 was INCO's strongest quarter of the year, keeping 2026 production on track.** Nickel matte output reached 18,341 tonnes, with deliveries of 20,158 tonnes, lifting revenue 22% qoq to US$353m. 9M26 net profit surged 181% yoy to US$147m, supported by an 18% increase in realised matte prices to US$14,306/tonne and higher ore sales. Vale Indonesia (INCO) needs around 19,500 tonnes of 4Q26 production to meet its 67,645 tonne 2026 target. Meanwhile, 9M26 ore sales at Bahodopi and Pomalaa rose 285% and 581% yoy to 2.38m wmt and 1.90m wmt, respectively, with Pomalaa's logistics bottleneck largely resolved in 4Q26.
- **2027 nickel ore sales growth hinges on higher RKAB allocation, with INCO requesting over 20m wmt.** INCO received 8.1m wmt in 2026 (6.4m saprolite and 1.7m limonite), with Pomalaa and Bahodopi each securing only around 30% of their requested quotas due to their HPAL facilities still being under construction. Management expects approval by December, allowing Pomalaa to resume ramp-up in Jan 27. A similar 8m wmt allocation in 2027 would only cover Bahodopi's requirements, versus full-capacity limonite needs of 20m wmt for Pomalaa, 10m wmt for Bahodopi and 13m-15m wmt for Sorowako. Completed HPAL facilities strengthen INCO's case for a higher allocation, while potential quota redistribution from miners facing legal issues could provide further upside. We conservatively expect INCO to sell 18m wmt of ore for 2027, comprising of 6m wmt of saprolite (+33% yoy) and 12m wmt of limonite (+606% yoy).
- **We conservatively estimate net profit at US$200m in 2027 (+14% yoy).** Growth will be driven by an 8% rise in nickel matte sales to 73,000 tonnes, assuming no production disruptions, alongside a 190% increase in ore sales to 18m wmt. However, we expect LME nickel prices to ease to US$16,000/tonne from US$17,000/tonne in 2026. Accordingly, revenue is projected to reach US$1.5b (+24% yoy), conservatively below management's expectation of doubling 2026 revenue, which is contingent on RKAB approval.

Company Description

Vale Indonesia produces nickel in matte, an intermediate product, from lateritic ores at its integrated mining and processing facilities near Sorowako, Sulawesi.

- **HPAL projects continue to progress,** although INCO remains cautious on exercising its call options amid challenging project economics. Pomalaa HPAL (120ktpa) is 95% complete, with inauguration targeted for mid-Dec 26, while Bahodopi HPAL (60ktpa) has reached 42% completion and targets mechanical completion in 1Q27. Sorowako HPAL (60ktpa) remains at an earlier stage of 19% completion, with operations expected around 2028. On equity participation, INCO is reassessing the economics of its potential investment, particularly in Pomalaa, through updated stress tests and due diligence, given weak nickel prices and elevated sulphur costs. Management emphasised that it would only exercise the call options if the returns are sufficiently attractive. Separately, a European automaker is currently evaluating Pomalaa's MHP, with traceability serving as a key selling point.
- **Capex will peak in 2027, but available funding provides some flexibility.** Planned capex and equity participation total US$482m in 2026, US$1.04b in 2027 and US$639m in 2028. INCO has a US$750m sustainability-linked loan, of which only US$170m has been drawn, alongside other potential off-balance-sheet funding options. Current cash position stood at US$247m, down 50% yoy. Longer-term growth initiatives include the Sorowako Unlock programme to improve plant throughput and the 13,557ha Tanamalia project, which remains at the FEL 2 stage with production targeted after 2030.

Valuation/Recommendation

- **Maintain BUY with a lower target price of Rp3,970** (from Rp7,600) based on -1SD of five-year average EV/EBITDA of 6.4x, reflecting a weaker nickel price outlook, lower earnings expectations, and market risk-off. We expect softer nickel prices amid an uncertain global demand environment and supply-demand imbalances. We also roll forward our valuation to 2027F.

Earnings Revision/Risk

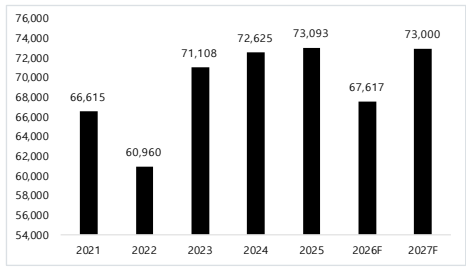

Earnings Revision

Year to 31 Dec	New		Original		Diff (%)	
(US$m)	2026F	2027F	2026F	2027F	2026F	2027F

Net profit	176	200	179	411	-1.9	-51.3

Source: INCO, UOB Kay Hian

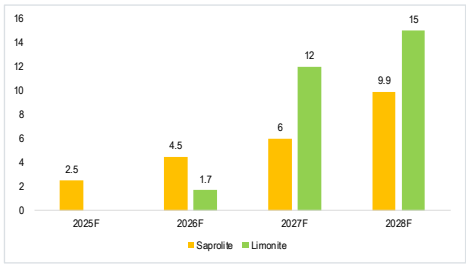

- **We cut our 2026-27 earnings estimates by 1.9% and 51.3% respectively.** The steep 2027 downgrade mainly reflects lower nickel matte ASP assumptions, lower saprolite sales assumption, and a significant reduction in assumed limonite ore prices following the government's September formula adjustment. Management attributed the adjustment to HPAL operators' concerns over high feedstock costs, rather than a direct price discount.
